Xhoi; This CDNA library was constructed from mRNA isolated
from cotyledons of 3- and 7-day-old williams seedlings
which were propagated on paper towels with distilled
water. The cotyledons were flash-frozen in liquid
nitrogen, then lyophilized for 72 hours. Unequal amounts
of mRNA was used for cDNA synthesis. Stratagene's cDNA

synthexix Kit (catalog number 200401) was used to
synthexiz the cDNA. First- stranded synthesis was
performed with 5-methyl dcTP, hone the ligated cDNA was
hemimethylated. A modification of Stratagene's
first-strand synthesis primer was used. An anchor
nucleotide (V-A, C, or G) was added to the 3' end of the
primer [GAGAGAGAGAGAGAGAAACATAGTTCTCAG(T)18] to anchor
the primer at the 5' end of the poly(A) tract. After
second strand synthesis, the cDNA ends were filled in
with cloned Pfu DNA, ligated to ECORI adapters and
subsequently phosphorylated. The XhoI site within the
first-strand synthesis, piner was then restricted by
digestion with XhoI; all XhoI sites in the cDNA
constructs were size-fractionated with a 500 bp cutoff,
using GibcoBRL Life Technologies' CDNA Size Fractionation
Stratagene's spluescript(m) II XR Fredigested vector
(pBluescript II SK(+) that has been digested with ECORI
and XhoI, and phosphorylated by Stratagene). 97% of the
white and blue colonies appear to content necombinant
plasmids with cDNA inserts, based on size (n=30). This
library was constructed by DI. Paul Keim and DI. Virginia
COVPAIL."
